The Trend Group and Shadin Avionics Team Up to Provide Turnkey Solution for Shadin Engine Trend Monitor

Clovis, California (February 24, 2006) - The Trend Group has signed a teaming agreement with Shadin Avionics of St. Louis Park, MN. Under the agreement, Shadin Avionics will include one year of The Trend Group's trend monitoring and analysis service with the sale of each new Engine Trend Monitor (ETM).

The Shadin Avionics ETM automatically records the airframe and engine data necessary for trend monitoring in a user friendly, downloadable format. It has previously been the operator's responsibility to have the downloaded data from the ETM analyzed by trained personnel. This agreement entitles customers of a new ETM to receive expert analysis of their flight data from The Trend Group at no charge for one year. In addition, The Trend Group has developed supplemental tools exclusively available to customers whose aircraft are equipped with the Shadin Avionics ETM.

"The services offered by The Trend Group are the perfect compliment to the time tested Shadin Avionics ETM," stated Dale Taunton, Vice President of Business Development at The Trend Group. "This agreement will prove to be an immediate benefit for new ETM customers."

Shadin Avionics was founded over 25 years ago and is now a TWG, Inc. company. Shadin Avionics designs and manufactures digital fuel, engine trend monitoring, and altitude management systems, as well as RVSM compliant airdata solutions, airdata computers, data converters, and customer instrumentation for general aviation, business aviation, commercial aviation, and military fixed and rotor wing applications. Please visit www.shadin.com for more information.

The Trend Group was founded in 1992 to provide turbine engine trend monitoring and analysis to the aviation industry. A conscientious focus on providing timely, reliable, actionable information to clients, in order to reduce operating costs and enhance the safety of clients' aircraft, has made the Trend Group a premier provider of Engine Trend Monitoring and Analysis worldwide. Please visit www.thetrendgroup.com for more information.
